- ▶ Preparation for scab treatment

CID LINES

Sow washing

During the long gestation period sows housed individually or in groups eventually get dirty, especially at the backside, udder and flank area. Within this dirt and the in-the-skin flora, bacteria and viruses like *Staphylococcus aureus*, *S. hyicus*, *Streptococcus suis*, PRRS, coli bacteria, PIA, dysentery etc. can be present in huge numbers.

To protect the newborn piglets and give them a healthy start from day one, we cannot expose them to this high level of infectious pathogens. Washing the sows before they enter the farrowing house is a standard procedure at every sow farm which aims for maximum profit through maximum prevention.

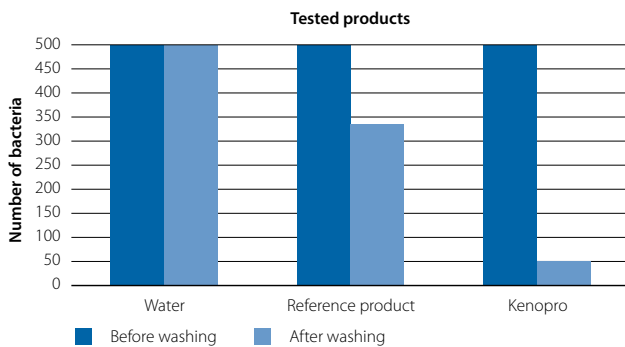

Kenopro™

The skin protecting sow shampoo that:

- is easy to apply with a foaming lance
- conditions the skin & relaxes the sow due to emollient compounds
- easily removes all dirt from the skin
- WORKS FAST, only 3-5min soaking needed.
- has strong sanitizing properties:

Strain	EN 1656 - 5 min
<i>Pseudomonas aeruginosa</i>	1.25%
<i>Staphylococcus aureus</i>	0.05%
<i>Staphylococcus hyicus</i>	0.50%
<i>Streptococcus Suis</i>	0.50%

Packaging: 10 - 25 kg

**WE
MAKE
HYGIENE
WORK**

Hygiene is health. Hygiene makes all the difference in the food chain, from farm to fork. At CID LINES we make hygiene work. We combine 360° solutions with tailored advice. We go for the highest service levels and we invest in continuous innovation. This way we help our partners focus on what's key: keeping their business profitable, sustainable and most of all healthy. Because hygiene is health and health means greater wellbeing for all.
